

Top Gun stocks a variety of coated collars. These are used to reduce wear on the casing and tubing, while reciprocating the tubing. Coated collars are especially important in slant and deviated wells which are prone to casing wear.

Vertical wells, however, are susceptible to 'tubing slap' caused by the push and pull of continuous pumping to surface.

Similar to rod on tubing wear, tubing on casing wear is experienced when reciprocating the tubing on continuous tubing pump applications. The use of coated tubing collars

Coated collars are an exclusive product to Top Gun

Standard Coated Collars are available in: $2 \frac{3}{8}$, $2 \frac{7}{8}$, and $3 \frac{1}{2}$ EUE

Custom sizes are available on request.
